Preface

The Weekly Coal Production (WCP) provides weekly estimates of U.S. coal production by State. Supplementary data are usually published monthly in two supplements: the Coal Exports and Imports Supplement and the Domestic Market Supplement. The Coal Exports and Imports Supplement contains detailed monthly data on U.S. coal and coke exports and imports. This week's Domestic Coal Market Supplement contains detailed monthly electric utility coal statistics, by Census Division and State, for generation, consumption, stocks, receipts, sulfur content, prices, and the origin and destination of coal shipments. This supplement also contains summary level, monthly data for all coal consuming sectors on a quarterly basis.

Preliminary coal production data are published quarterly based on production data collected using Form EIA-6, "Coal Distribution Report." The coal production estimation error for a quarter at the national level (i.e., the difference between the sum of the weekly estimates for a quarter and the quarterly EIA-6 preliminary data) ranges from 1 percent to 4 percent.

Final coal production data are published annually based on the EIA-7A coal production survey. The re-

vision error for a quarter at the national level (i.e., the difference between the EIA-6 preliminary data and the EIA-7A final data) ranges from .02 percent to .08 percent.

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. Weekly Coal Production is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly Coal Distribution Report, the Quarterly Coal Report, Coal Production 1988, and Coal Data: A Reference.

This publication was prepared by Wayne M. Watson and Michelle D. Bowles under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202/586-8800).

Summary

U.S. coal production in the week ended August 4, 1990, as estimated by the Energy Information Administration, totaled 20 million short tons, slightly lower than production in the previous week, but 8 percent more than in the comparable week in 1989. Production East of the Mississippi River totaled 12 million short tons, and production West of the Mississippi River totaled 8 million short tons.

Coal production in July 1990 totaled 81 million short tons, 5 percent less than production in the previous month and 22 percent more than in July 1989. The lower level of production last year reflected the effect of the regional wildcat strike activities against the Pittston Coal Group.

Coal receipts at electric utility plants in April 1990 were 64 million short tons, 3 percent higher than in April 1989.

Coal consumption at electric utility plants in May 1990 was 59 million short tons. This was nearly 1 million short tons higher than in May 1989, bringing the total for the first 5 months of 1990 to 301 million short tons, 1 percent lower than the comparable period in 1989.

Coal stocks at electric utilities totaled 163 million short tons at the end of May 1990. This was 12 million short tons higher than a year earlier, and the highest level since the end of May 1988.

This week's report includes revised electric utility coal receipts data for 1989.

Reported as of the last day of the period.

Manufacturing plants only.

Not available.

Note: Total may not equal sum of components because of independent rounding.

^(*) For quantity data, the absolute value of the number is less than 0.5 gigawatthours. For percentage calculations, the absolute value of the number is less than 0.05 percent.

(1) Percent change calculation not meaningful.

Notes: Negative generation denotes that electric power consumed for plant use exceeds gross generation. Totals may not equal sum of components because of independent rounding.

Notes: Totals may not equal sum of components because of Independent rounding. MM Blu represents million Btu. Source: Federal Energy Regulatory Commission, FERC Form 423, "Monthly Report of Cost and Quality of Fuels for Electric Plants."

BECAUSE IT'S FREE!

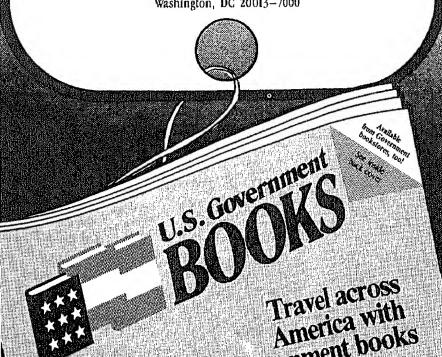

Every year the Government publishes thousands of books. And every year the U.S. Government Printing Office sells these books to the public. Now there's a book that tells you about the Government's new and popular publications—but it's not for sale . . . it's free!

It's our catalog of books—hundreds of books from virtually every Government agency. The subjects range from agriculture, business, children, and diet to science, space, transportation, and vacations. And there are titles on military history, education, hobbies, physical fitness, gardening, and much, much more! There's also a special section for recently published books.

Find out about the Government's new and popular books by sending today for a copy of the book we don't sell. Write—
